

Agile Fundamentals in practice

How to create value sooner

Goal of this session

Everyone understand what you can do to benefit from Agile in your day to day work.

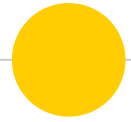

Principles for our session

- It's ok to interrupt me and ask questions at any point in time
- There's no dumb question
- We don't judge each other's opinion; we try to learn from one another
- This is a room for experimentation, don't be afraid of expose yourself.

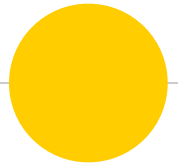

Agenda

- Tune in
- A brief history
- Agile Manifesto
- Exercise 1: What's Agile and what's not?
- Break
- What leads to success?
- Exercise 2: The cost of parallel activities
- Sweet spot
- Exercise 3: The Identifying the sweet spot
- Break
- Avoiding Common Agile Traps
- Exercise 4: Moving from Output to Outcome
- Tune Out

What do you expect from today?

- Open menti.com
- Use the following code:

A little bit of history

What were the challenges with software development two decades ago?

How software was developed two decades ago

How software was developed two decades ago

Features for stakeholders instead of end-users

How software was developed two decades ago

Features for stakeholders instead of end-users

Focus on building instead of learning

How software was developed two decades ago

Features for stakeholders instead of end-users

Focus on building instead of learning

Changes were unwelcomed

How software was developed two decades ago

Features for stakeholders instead of end-users

Focus on building instead of learning

Changes were unwelcomed

Long time to market

What were the problems with software development two decades ago?

What were the problems with software development two decades ago?

Matching customers' expectations

What were the problems with software development two decades ago?

Matching customers'
expectations

Handling change
requests

What were the problems with software development two decades ago?

Matching customers' expectations

Handling change requests

Lack of accountability

What were the problems with software development two decades ago?

Matching customers' expectations

Handling change requests

Lack of accountability

Silo Effect

What were the problems with software development two decades ago?

Matching customers' expectations

Handling change requests

Lack of accountability

Silo Effect

No interaction between Devs and Business

A dramatic change was needed

Agile Manifesto came to revolutionize the software industry

The Agile Manifesto

- **Individuals and interactions** over processes and tools
- **Working software** over comprehensive documentation
- **Customer collaboration** over contract negotiation
- **Responding to change** over following a plan

Principles

Our highest priority is to satisfy the customer through early and continuous delivery of valuable software.

Welcome changing requirements, even late in development. Agile processes harness change for the customer's competitive advantage.

Deliver working software frequently, from a couple of weeks to a couple of months, with a preference to the shorter timescale.

Business people and developers must work together daily throughout the project.

Principles

Our highest priority is to satisfy the customer through early and continuous delivery of valuable software.

Welcome changing requirements, even late in development. Agile processes harness change for the customer's competitive advantage.

Working software is the primary measure of progress.

Agile processes promote sustainable development. The sponsors, developers, and users should be able to maintain a constant pace indefinitely.

Principles

Continuous attention to technical excellence and good design enhances agility.

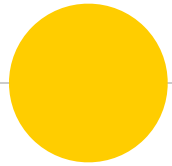

Simplicity--the art of maximizing the amount of work not done--is essential.

The best architectures, requirements, and designs emerge from self-organizing teams.

At regular intervals, the team reflects on how to become more effective, then tunes and adjusts its behavior accordingly.

Exercise 1

- What's Agile?
- What's not Agile?

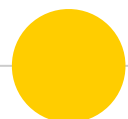

What leads to success?

Benefiting from Agile

Jeff Patton

“Remember: at the end of the day, your job isn’t to get the requirements right — your job is to change the world.”

First where to land, then how

- Product Vision
- Product Goals
- OKRs
- Prioritization

A full moon is centered in the upper half of the image, set against a sky that transitions from a deep teal at the top to a warm orange near the horizon. Below the horizon, the silhouettes of several mountain ranges are visible, with some clouds caught in the valleys. A white rectangular box with a thin yellow border is positioned in the center of the image, containing the text.

**WITHOUT A VISION TO PURSUE, THE
SCRUM TEAM BECOMES A FEATURE
FACTORY**

Objective Key Results

- **OBJECTIVE:** Grow our business
- **Key results:**
 - Grow revenue to \$3M
 - Launch a new revenue stream
 - Reduce churn to 5% annually

Focus

Focus

Focus means clarity

One priority at a time

Avoid paralel activites at all cost

Steve Jobs

“People think focus means saying yes to the thing you’ve got to focus on. But that’s not what it means at all. It means saying no to the hundred other good ideas that there are. You have to pick carefully.

Exercise 2 - Cost of Multi-tasking

Take a blank paper, a pen, and prepare a timer. Now, do the following:

a-) Write from 1 to 10 in one line, then from 10 to 1 in the second line. Time it.

b-) Alternating, write 1 in the first line, 10 in the second, and do so on until you finish. Time it.

c-) Now, write on the first line from 1 to 10, second line from 10 to 1, and third line from A to J. Time it.

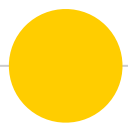

d-) Alternate the content of letter **c**. Write 1 on the first line, 10 on the second, and A on the third, do that until you finish.

Now compare the difference between A and B, C and D

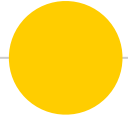

*Start finishing.
Stop starting.*

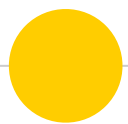

Inspect and Adapt

Inspect and Adapt

- ① Embrace learning
- ① Accept our ignorance
- ① Ask more questions instead of providing answers

What don't we know?

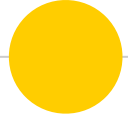

What don't we know?

KNOWNS AND UNKNOWNNS

	Knowns	Unknowns
Known	Known knowns (facts)	Known unknowns (question)
Unknown	Unknown knowns (intuition)	Unknown unknowns (exploration)

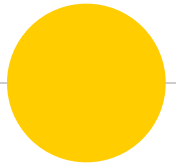

How do you define Scrum in one sentence?

How do you define Scrum in one sentence?

“Using what we know
to discover what we
don’t know.”

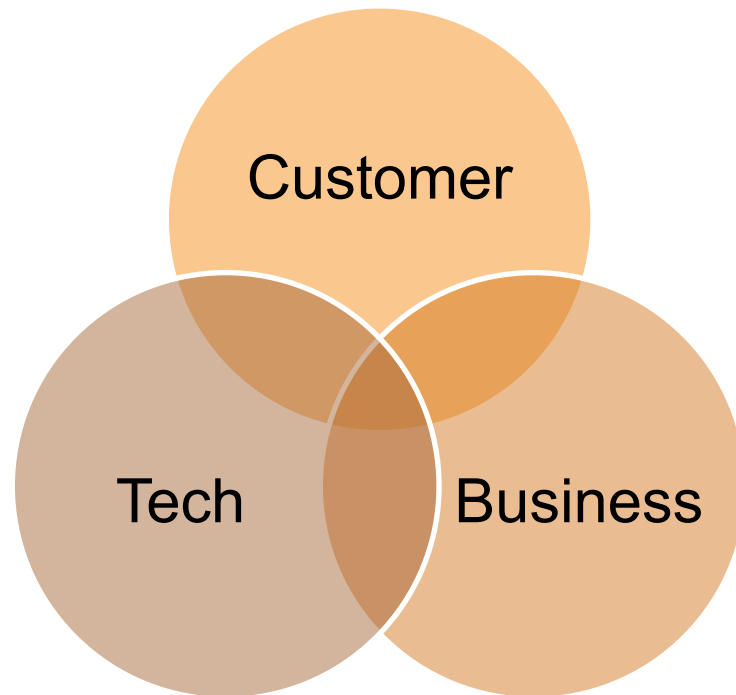

- Maarten Dalmijn

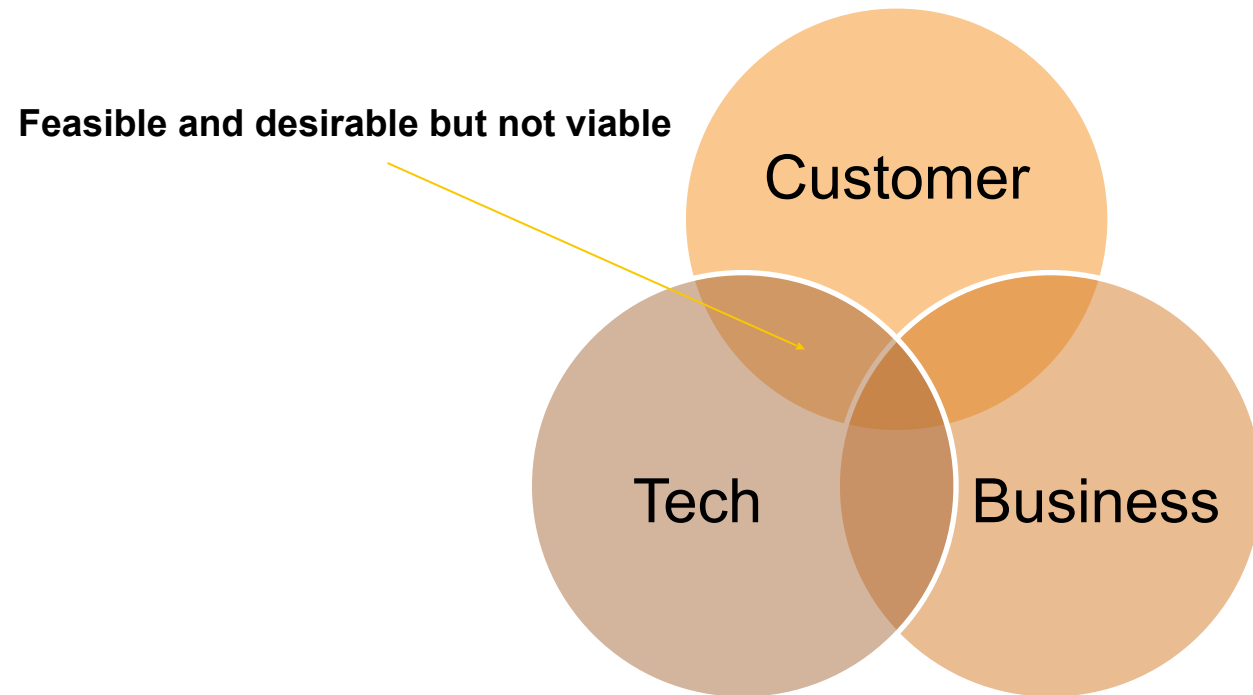

How can we prioritize what matters?

Identifying the sweet spot

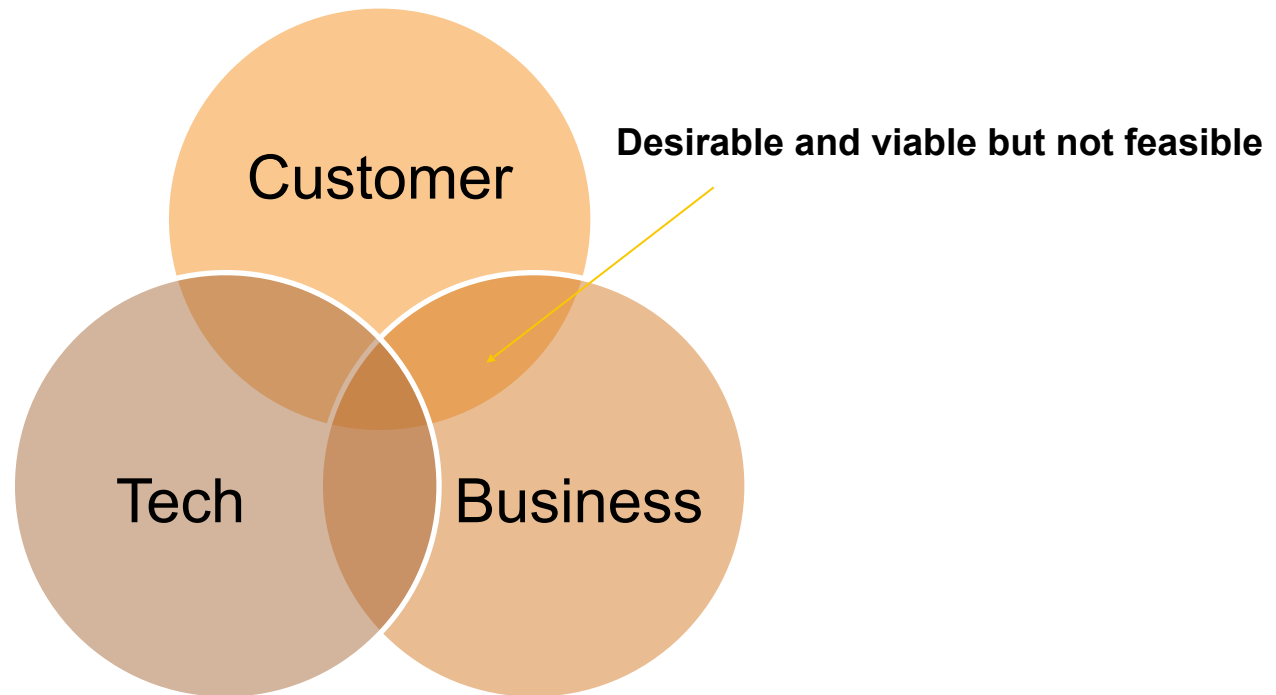

Find a problem that is worth solving

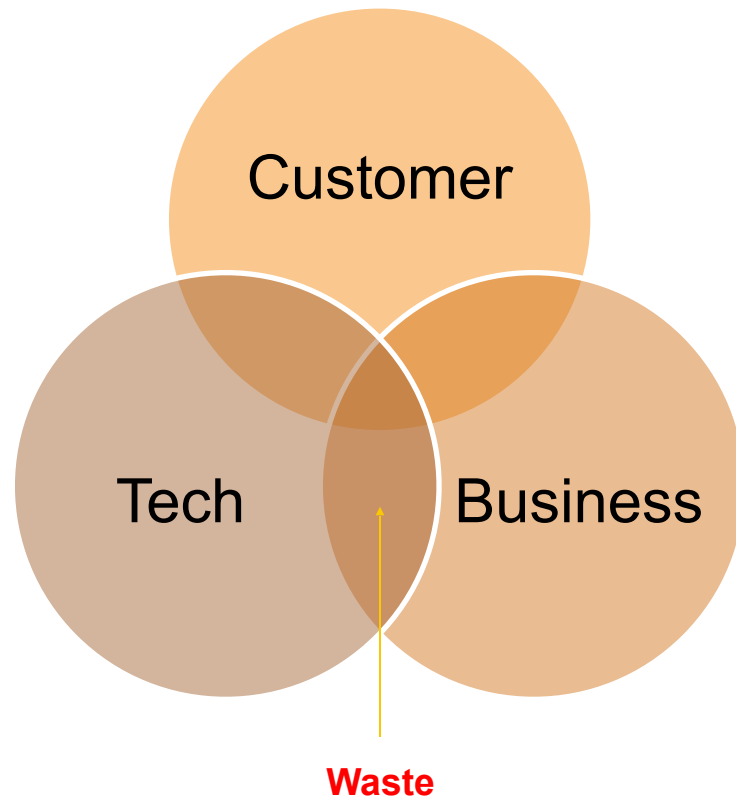

Find a problem that is worth solving

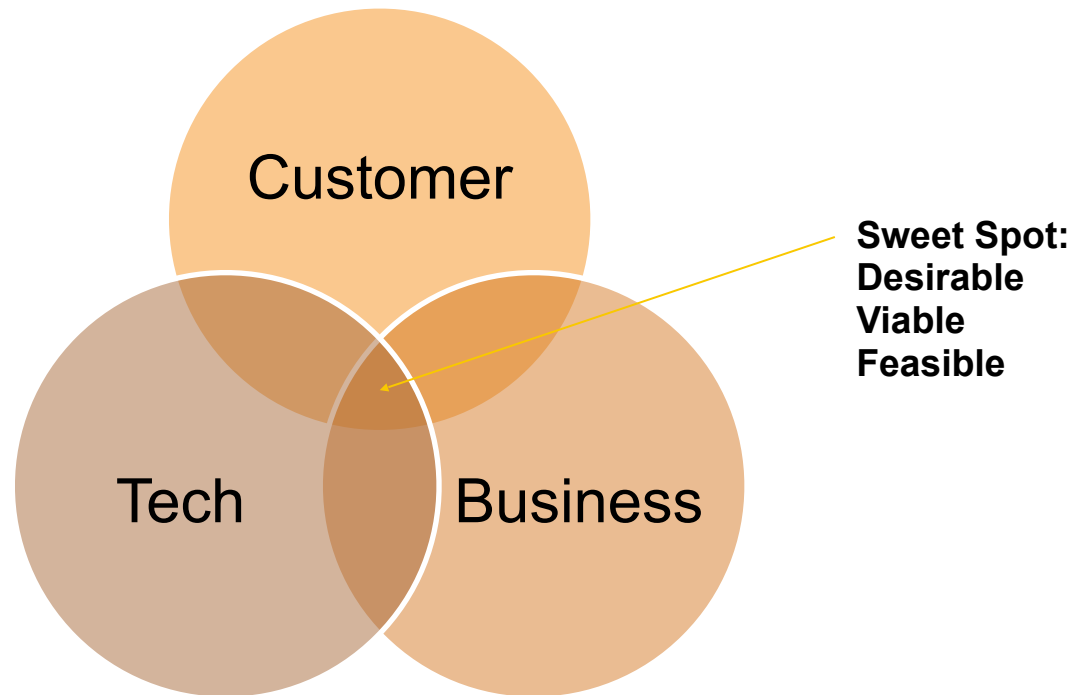

Find a problem that is worth solving

Find a problem that is worth solving

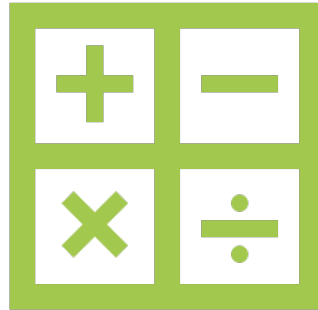

Find a problem that is worth solving

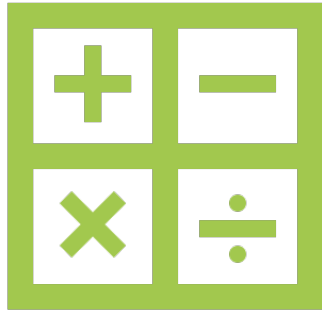

Focus on problems worth solving

Focus on problems worth solving

Which problems are worthwhile
solving?

Focus on problems worth solving

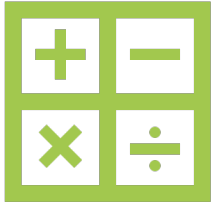

Which problems are worthwhile solving?

Does the customer care about it?

Focus on problems worth solving

Which problems are
worthwhile solving?

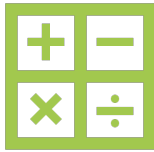

Does the customer
care about it?

Can you solve the
customer pain?

Focus on problems worth solving

Which problems are
worthwhile solving?

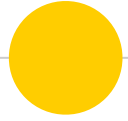

Does the customer
care about it?

Can you solve the
customer pain?

Does it generate
Business Value?

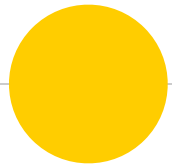

Exercise 3

- Go to miro board

Break

Let's give ourselves 10 minutes and come back

Common traps with Agile

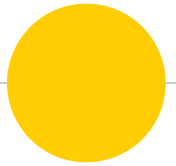

Avoiding pitfalls on your journey

Don't miss the point

Agile is a means to an end.

All we want is to deliver value faster.

When we do Agile for the sake of it, failure is the only possible outcome.

Your job isn't to please stakeholders

You are supposed to create value as soon as possible

Who are stakeholders?

A large orange rectangle with the text "Not your customers" centered inside it in white.

Not your
customers

Who are stakeholders?

Not your
customers

Not your
enemies

Who are stakeholders?

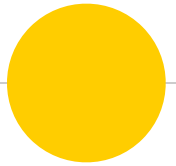

Not your
customers

Not your
enemies

They are
your
partners

Be a facilitator. Make the stakeholders care about each other.

Set a clear strategy instead of a prescriptive roadmap

Do you know where you want to go?

Strategy versus roadmap

Focus on the outcome

Strategy versus roadmap

Focus on the outcome

What do we want to achieve in a given time frame?

Strategy versus roadmap

Focus on the outcome

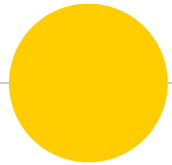

What do we want to achieve in a given time frame?

Don't talk about features without knowing the goal

Start with the end in mind. Which outcome do you want to achieve?

Solutions vs Problem

You don't implement solutions. You solve problems.

**What
happens
when you
focus on the
solution?**

Solution Space

- Solution Space
 - A specific implementation to address the need or product requirement

- NASA: space pen (\$1 M R&D cost)
- Russians: pencil

Copyright © 2011 YourVersion

Problem Space vs. Solution Space

■ Problem Space

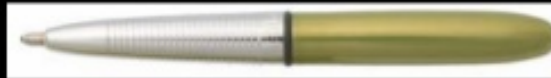

- A customer problem, need, or benefit that the product should address
- A product requirement

Example:

- Ability to write in space (zero gravity)

■ Solution Space

- A specific implementation to address the need or product requirement

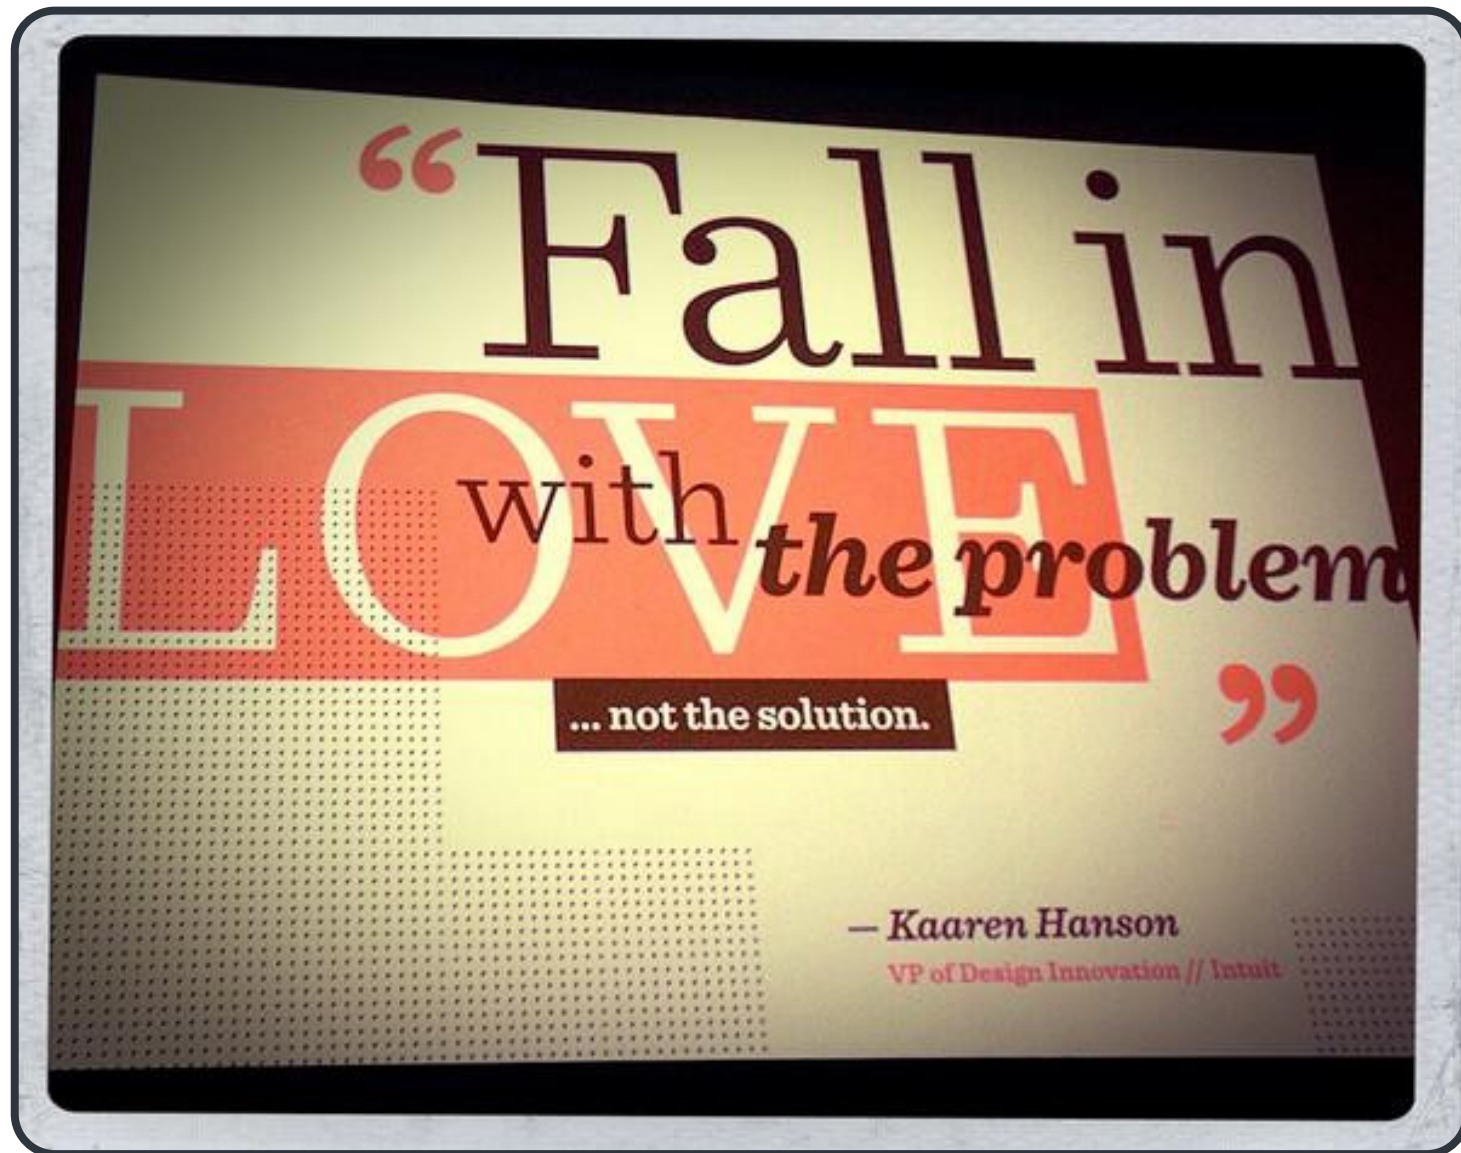

- NASA: space pen (\$1 M R&D cost)
- Russians: pencil

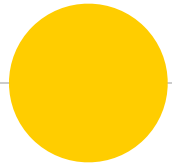

Copyright © 2011 YourVersion

**The focus
should be on
the problem**

**First comes
the Problem,
then the
solution**

Don't get obsessed with the framework

Ensure you create value.

Agile is not enough

It doesn't matter which
framework you work with.

Some things don't matter

It doesn't matter which framework you work with.

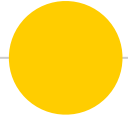

Neither **Scrum**, nor **Kanban**,
nor **SAFe**, nor **LeSS**, or anything else
can guarantee you deliver value.

**Without a value driven
mindset, you will simply
miss opportunities to create
value.**

There's no silver bullet!

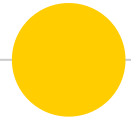

Moving from output to outcome

- What do you need that for?
- Which problem do you want to solve with that?
- How do you currently deal with the current problem?
- What would happen if we don't do that at all?
- Let's say we develop your request, how would you measure the success of it?
- I see your convinced by your solution, could you help me understand which evidences give your conviction?

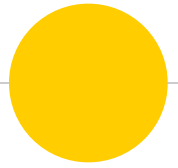

Exercise 4

- Go to miro board

How do leave our session?

- Open menti.com
- Use the following code:

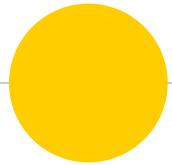

Bonus Material

Ones more thing

Think before you act

*A **woodsman** was once asked, “What would you do **if you had just five minutes to chop down a tree?**” He answered, “**I would spend the first two and a half minutes sharpening my axe**”*

Know the Needs behind the requests

What is behind the wants?

Needs versus requests

1

Evaluate carefully the User Requests

Needs versus requests

1

Evaluate carefully the User Requests

2

Understand the needs beyond the wants

Needs versus requests

1

Evaluate carefully
the User
Requests

2

Understand the
needs beyond
the wants

3

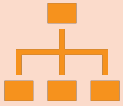

Identify the
underlying
problems

Melissa Perri

“It’s not the customer’s job to solve their own problems. It’s your job to ask them the right questions.”

Customer Service case

"We have too many requests"

"Our system is inefficient"

"We cannot reply to all requests on time"

**Join me and let's help the
product world**
